US Army Sniper Training Manual

Synopsis

This field manual provides information needed to train and equip snipers and to aid them in their missions and operations. It is intended for use by commanders, staffs, trainers, snipers, and soldiers at training posts, Army schools, and units. This manual is organized as a reference for snipers and leads the trainer through the material needed to conduct sniper training. Subjects include equipment, weapon capabilities, fundamentals of marksmanship and ballistics, field skills, mission planning, and skill sustainment. The left-handed firer can become a sniper, but all material in this book is referenced to the right-handed firer. The sniper has special abilities, training and equipment. His job is to deliver discriminatory highly accurate rifle fire against enemy targets, which cannot be engaged successfully by the rifleman because of range, size, location, fleeting nature, or visibility. Sniping requires the development of basic infantry skills to a high degree of perfection. A sniper's training incorporates a wide variety of subjects designed to increase his value as a force multiplier and to ensure his survival on the battlefield. The art of sniping requires learning and repetitiously practicing these skills until mastered. A sniper must be highly trained in long-range rifle marksmanship and field craft skills to ensure maximum effective engagements with minimum risk.

Customer Reviews

This manual is an actual Army training manual. Because of that, it spends a lot of time on issues

and features that are of no interest to the civilian long-range shooter. Too many specifics to military doctrine and specific weapon systems. Would not recommend for those whose whole interest is in learning, or increasing ability for sniping or long-range shooting.

As a B4 qualified Soldier, I can honestly say that I have read this Manual from cover to cover. I highly recommend this FM to anyone interested in becoming an Army Sniper, or if you are interested in learning some nifty field craft.

Great reading for the ELR rifleman. Much is suited for sniper training, but tips on positioning and the little things that make the difference are well worth it.

Lots of useful info, especially for adjusting range when shooting at a target which is at a much higher or lower elevation, as well as methods for judging wind speed down range in the absence of range flags, etc. The ballistics tables are for the .308 / 7.62 round used by US Army snipers, but the general principles are very informative.

I thought it would have more on technique and form but covered tracking, and evasion more in depth

Technically good. printing quality sub-standard, as is the layout.

A singularly boring read...maybe of interest to actual snipers but of little value to anyone else even those interested in long range shooting.

Very good, informational FM, combined with an instructor could be highly effective in teaching at least the basics of being a sniper.
