God And Evolution: A Reader

Synopsis

How can we reconcile belief in God and Darwinism, divine action and an evolutionary world? The first book of its kind, this Reader represents the diversity of views which surround the interaction of evolutionary theory and the Christian tradition. Ideal for students with no previous knowledge of the field, the book introduces the methodologies of the study of science and religion, and evolutionary biology, and presents the views of influential thinkers from a variety of disciplines, including: the natural sciences history theology philosophy. From current scientific developments to contemporary philosophical perspectives, Darwin to Dawkins, Creationism to Intelligent Design, God and Evolution highlights neglected but important views, such as those of feminist scholars, and contemporary revisionists, as well as some of the best known writers in the field.

God and Evolution: A Reader, edited by Mary Kathleen Cunningham (New York: Routledge, 2007) If there is a hurdle that often confronts those seeking to understand and think through the relationship between God and evolution, it is an awareness and appreciation of the range of views on the subject. Cunningham's reader goes a good way towards providing an up-to-date collection of key excerpts from the most important representatives of various positions and viewpoints in this area. More often than not, people are more aware of the positions that present the choice as "either/or" than with those that see the situation as "both/and". This aspect of popular understanding particularly affects educators like myself, since it represents the starting point of the majority of

students in any given class addressing the topic of religion and science. Generally, professors have to put together a packet of readings much like this one, and thus a reader such as this one provides a useful resource for use in classes. Cunningham's reader is divided into seven sections:

methodology, evolutionary theory, creationism, intelligent design, naturalism, evolutionary theism, and reformulations of tradition. A particular strength of the collection is that it seeks to do more than provide a selection of contemporary viewpoints. A historical perspective is offered, including important excerpts from the past as well as more recently. The authors whose works are excerpted include philosophers of science and theologians as well as evolutionary biologists. Having a single volume whose contributors include Charles Darwin and William Paley, Michael Behe and Richard Dawkins, is itself impressive.
